Empirical Cluster Bootstrap (without repl.)
Analytic Superpopulation (2 × 1.96 × SD / √k)
Analytic with FPC (Finite Population Correction, N=19)
Target Precision Bound (11.0 pp CI Width, ±5.5 pp)
Precision Benchmark (k = 15 events)
At k = 15:
• Empirical CI width: 10.96 pp (half-width ±5.48 pp)
• Superpopulation width: 7.77 pp
• FPC-adjusted width: 3.66 pp
